SPRAY PUMP.UK

Contact Spray Pump UK today for expert advice, competitive pricing, and a spray package that delivers the perfect finish every time.

NEW TOUCHSCREEN CONTROL

Easier to control and access information

The new larger interface provides simple touchscreen operations and makes the reactor easy to operate. All the necessary spray information and control is on one screen, making it intuitive and easy to understand. New setup menus offer more controls than ever for owners and managers to optimise the machine for their business needs.

ReactorConnect™

Reactor Connect Screen

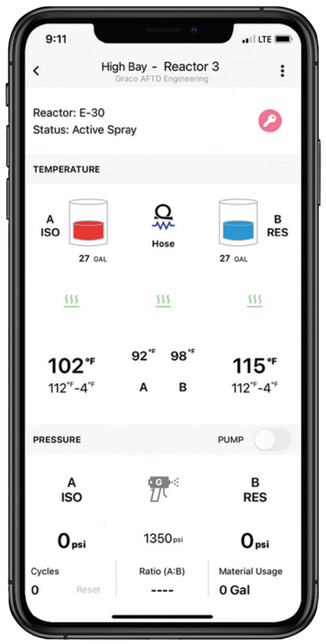

- Adjust temperature and pressure points
- View drum levels
- Turn heat zones on/off
- View and reset cycle counter/material usage
- Turn system on/off
- Turn pump on/off
- Toggle between Spray, Park and Jog modes
- View ratio

Multi-System Dashboard

- Current Reactor status
- Daily “power on” time
- Daily “spray” time
- Daily material usage

Online Interface

- Create user accounts, company profiles and users
- Assign reactors to your company
- Advanced Reactor analytics
- Control access
- GPS location maps
- Automated summary reports
- Customised reporting

ELECTRIC TRANSFER PUMPS

Powerful, Quiet, Smart

Get in the flow with Graco’s revolutionary NEW Core electric transfer pumps; designed to optimise material supply and minimize downtime. Quieter and less expensive to operate than traditional pneumatic pumps, the new electric pumps can communicate with the Reactor 3 to give you a fully-connected system.

NEW SUPPLY PUMP SHUTDOWN

Senses when a drum is empty and automatically shuts down the transfer pumps and Reactor 3 proportioner before damage occurs, including air entering the system that can compromise the ratio.

NEW SMART SUPPLY

The software automatically monitors and adjusts Reactor 3 proportioner inlet pressures to optimise material feed and on-ratio performance. Maintains inlet pressure between 80-200 psi — boosting power to the transfer pump’s electric motors when needed. Achieve Smart Supply when using Core pumps with a Reactor 3 Elite model.

6 TIMES QUIETER

The Core E1 pump is up to 6 times quieter than pneumatic pumps. That is equivalent to reducing the sound in your rig from being as loud as a motorcycle to as loud as a car.

PRO CONNECT TECHNOLOGY

With our exclusive ProConnect technology, you can quickly disconnect the motor from the pump lower and easily transfer the pump from drum to drum…even in low ceiling height rigs. Paying for taller rigs or having to tip the drum to remove the pump is no longer necessary. ProConnect is available on both the Core and T4 pumps.

TIP: Have an extra pump lower installed on your rig to make changing drums even faster and cleaner.
